RE: Screening Level Soil Sampling Summary Report
Winston Farm, Saugerties, New York
LaBella Project No. 2232640

Dear Mr. Mullen, Mr. Montano, and Mr. Richers:

LaBella Associates D.P.C. (LaBella) is pleased to submit this summary letter report associated with screening level soil sampling conducted at the above referenced Winston Farm Property, hereinafter referred to as the ("Site"). A Phase I Environmental Site Assessment (ESA) Report prepared by JMT of New York, Inc. (JMT) in June 2020 identified historical agricultural activities at the Site including a dairy farm and orchards. The report noted that it is possible that pesticides were applied to the agricultural portions of the Site but that according to ASTM standards, normal use and application of these chemical does not constitute a recognized environmental condition (REC). Given the planned redevelopment of the Site that may disturb soil or result in direct contact with soil in residential yards, LaBella was requested to perform a screening level soil sampling investigation at the Site.

LaBella conducted shallow soil screening on June 29, 2023, at various locations in the eastern fields and orchard to assess for evidence of residual pesticides, arsenic, lead, and mercury. Sample locations are depicted on the attached figure. Sampling was completed consistent with the scope of services specified in our proposal dated June 1, 2023, and included collection of a total of 13 soil samples submitted for laboratory analysis. LaBella's methods, observations, results, conclusions, and recommendations are included in the following sections. Supporting documentation is attached.

Shallow Soil Sample Collection

In each of the six (6) areas outlined on the attached figure, a LaBella environmental professional collected five-point composite soil samples from two depth intervals (0 to 2 inches below grade, and 6 to 8 inches below grade), for a total of six (6) composite samples. In addition, one background soil sample (0 to 2 inches below grade) was collected from an area north of the former orchard area, understood to have no or limited past agricultural use, to assess background metals concentrations in the Subject Property soil.

Soil samples were sent to York Analytical Laboratory (York) in Stratford, Connecticut, and analyzed for pesticides using USEPA Method 8081 and for arsenic, lead, and mercury using USEPA Methods 6010 and 7473. The background soil sample was analyzed for arsenic, lead, and mercury to help interpret the significance of the other sample results.

Analytical Results Summary

Laboratory analytical data were reviewed, tabulated, and compared to the 6 NYCRR Part 375-6.8 Unrestricted Use Soil Cleanup Objectives (UUSCOs), and as additional points of reference, the soil results table also includes the Part 375 Residential Use SCO (RUSCOs), which are applicable to sites

in a NYSDEC remediation program but can be helpful in property evaluation. Findings are summarized below, and a data summary table and the laboratory analytical report are attached.

- No pesticide concentrations greater than the laboratory method detection limit were reported in the analyzed samples.
- Arsenic was reported at concentrations slightly greater than its RUSCO of 16 milligrams per kilogram (mg/kg) in all soil samples collected. Concentrations ranged from 16.7 mg/kg in the background soil sample WF-BACK(0-2in), to 33.9 mg/kg in the southwest agricultural field from 6 to 8 inches below grade WF-SW(6-8in). The Site average arsenic concentration was 23.1 mg/kg. The higher concentrations were generally noted in the samples collected from the 6 to 8-inch depth interval.
- A lead concentration of 67.6 mg/kg was reported in soil sample WF-NW(6-8in) from the northwest agricultural field (former orchard) that slightly exceeds its UUSCO (63 mg/kg) but less than its RUSCO (400 mg/kg).
- A mercury concentration of 0.212 mg/kg was reported in soil sample WF-N Cent(6-8in) from the north-central agricultural field that slightly exceeds its UUSCO (0.18 mg/kg) but less than its RUSCO (0.81 mg/kg).

Conclusions and Recommendations

LaBella conducted a screening level soil investigation in the vicinity of a former orchard and agricultural fields in the eastern portion of the Site where there was a lack of information pertaining to prior agricultural use, pesticide use, and surrounding soils.

Thirteen (13) soil samples including a background sample were collected across six (6) sampling areas, shown on the attached figure. Analytical results indicated arsenic concentrations greater than its RUSCO at all sample locations in both sampling intervals, and including the background sample.

Arsenic concentrations across the Site are greater than background levels and RUSCO, and lead and mercury were reported at concentrations in one location each greater than their UUSCOs but less than their RUSCOs. While these concentrations are not expected to require remediation under current use of the Subject Property, based on a planned site redevelopment for residential use, a soil cover program (pavement, building, or two feet of clean soil) is recommended to prevent direct contact by future residents. When disturbed, these soils should be handled properly to minimize contact and exposure. If the soil will be disposed of off-site, it will be considered solid waste requiring proper disposal as they are not “clean fill” as defined by NYSDEC.

Limitations

The information presented herein summarizes the activities in the project Site areas. The data and conclusions represent those portions of the Site analyzed as of the date of the fieldwork, and they are not relevant to any other portions of this Site or any other property. LaBella also cannot be held accountable for activities or events that may have affected the distribution of detected compounds after the date of the fieldwork.

The scope of work for this project is based on generally accepted practices and established protocols and the scope of work identified in LaBella’s proposal dated June 1, 2023. The findings and conclusions are, therefore, properly considered probabilities based on professional judgment and

available Site data, but do not constitute absolute certainty that all possible compounds have now been identified on this Site.

Please feel free to contact me at (518) 266-7355 or Arlette St. Romain at (518) 824-1928 if you have any questions regarding this report.

Respectfully submitted,

LaBella Associates

Branson Fields
Environmental Scientist

Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on June 30, 2023 and listed below. The project was identified as your project: **2232640 Winston Farm.**

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the customary acceptance requirements for environmental samples except those indicated under the Sample and Analysis Qualifiers section of this report.

All analyses met the method and laboratory standard operating procedure requirements except as indicated by any data flags, the meaning of which are explained in the Sample and Data Qualifiers Relating to This Work Order section of this report and case narrative if applicable.

The results of the analyses, which are all reported on dry weight basis (soils) unless otherwise noted, are detailed in the following pages.

Please contact Client Services at 203.325.1371 with any questions regarding this report.

General Notes for York Project (SDG) No.: 23F2019

1. The RLs and MDLs (Reporting Limit and Method Detection Limit respectively) reported are adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference. The RL(REPORTING LIMIT) is based upon the lowest standard utilized for the calibration where applicable.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All analyses conducted met method or Laboratory SOP requirements. See the Sample and Data Qualifiers Section for further information.
6. It is noted that no analyses reported herein were subcontracted to another laboratory, unless noted in the report.
7. This report reflects results that relate only to the samples submitted on the attached chain-of-custody form(s) received by York.
8. Analyses conducted at York Analytical Laboratories, Inc. Stratford, CT are indicated by NY Cert. No. 10854; those conducted at York Analytical Laboratories, Inc., Richmond Hill, NY are indicated by NY Cert. No. 12058.

Sample and Data Qualifiers Relating to This Work Order

M-SPKM The spike recovery is not within acceptance windows due to sample non-homogeneity, or matrix interference.

Definitions and Other Explanations

*	Analyte is not certified or the state of the samples origination does not offer certification for the Analyte.
ND	NOT DETECTED - the analyte is not detected at the Reported to level (LOQ/RL or LOD/MDL)
RL	REPORTING LIMIT - the minimum reportable value based upon the lowest point in the analyte calibration curve.
LOQ	LIMIT OF QUANTITATION - the minimum concentration of a target analyte that can be reported within a specified degree of confidence. This is the lowest point in an analyte calibration curve that has been subjected to all steps of the processing/analysis and verified to meet defined criteria. This is based upon NELAC 2009 Standards and applies to all analyses.
LOD	LIMIT OF DETECTION - a verified estimate of the minimum concentration of a substance in a given matrix that an analytical process can reliably detect. This is based upon NELAC 2009 Standards and applies to all analyses conducted under the auspices of EPA SW-846.
MDL	METHOD DETECTION LIMIT - a statistically derived estimate of the minimum amount of a substance an analytical system can reliably detect with a 99% confidence that the concentration of the substance is greater than zero. This is based upon 40 CFR Part 136 Appendix B and applies only to EPA 600 and 200 series methods.
Reported to	This indicates that the data for a particular analysis is reported to either the LOD/MDL, or the LOQ/RL. In cases where the "Reported to" is located above the LOD/MDL, any value between this and the LOQ represents an estimated value which is "J" flagged accordingly. This applies to volatile and semi-volatile target compounds only.
NR	Not reported
RPD	Relative Percent Difference
Wet	The data has been reported on an as-received (wet weight) basis
Low Bias	Low Bias flag indicates that the recovery of the flagged analyte is below the laboratory or regulatory lower control limit. The data user should take note that this analyte may be biased low but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
High Bias	High Bias flag indicates that the recovery of the flagged analyte is above the laboratory or regulatory upper control limit. The data user should take note that this analyte may be biased high but should evaluate multiple lines of evidence including the LCS and site-specific MS/MSD data to draw bias conclusions. In cases where no site-specific MS/MSD was requested, only the LCS data can be used to evaluate such bias.
Non-Dir.	Non-dir. flag (Non-Directional Bias) indicates that the Relative Percent Difference (RPD) (a measure of precision) among the MS and MSD data is outside the laboratory or regulatory control limit. This alerts the data user where the MS and MSD are from site-specific samples that the RPD is high due to either non-homogeneous distribution of target analyte between the MS/MSD or indicates poor reproducibility for other reasons.

If EPA SW-846 method 8270 is included herein it is noted that the target compound N-nitrosodiphenylamine (NDPA) decomposes in the gas chromatographic inlet and cannot be separated from diphenylamine (DPA). These results could actually represent 100% DPA, 100% NDPA or some combination of the two. For this reason, York reports the combined result for n-nitrosodiphenylamine and diphenylamine for either of these compounds as a combined concentration as Diphenylamine.

If Total PCBs are detected and the target aroclors reported are "Not detected", the Total PCB value is reported due to the presence of either or both Aroclors 1262 and 1268 which are non-target aroclors for some regulatory lists.

2-chloroethylvinyl ether readily breaks down under acidic conditions. Samples that are acid preserved, including standards will exhibit breakdown. The data user should take note.

Certification for pH is no longer offered by NYDOH ELAP.

Semi-Volatile and Volatile analyses are reported down to the LOD/MDL, with values between the LOD/MDL and the LOQ being "J" flagged as estimated results.

For analyses by EPA SW-846-8270D, the Limit of Quantitation (LOQ) reported for benzidine is based upon the lowest standard used for calibration and is not a verified LOQ due to this compound's propensity for oxidative losses during extraction/concentration procedures and non-reproducible chromatographic performance.
